Education

2019 **B.A. Computer Science and Math**, UMass, Amherst

Skills

Rust, Haskell, TypeScript/JavaScript, Cryptography, Distributed Systems, Web Servers, Internet Standards, Security, PostgreSQL, Kubernetes, Smart Contracts

Professional Experience

2022–Present **Senior Software Engineer**, *Google Chrome AI Security*, Remote

- Tech lead of a project developing private authentication protocols for the web using zero-knowledge proofs, with implementations in Rust.
- Drafted **Anonymous Tokens with Hidden Metadata** standard (**implementation**). Deployed to protect billions of users from spam texts via RCS/iMessage integration.
- Drafted **Anonymous Credit Tokens** standard (**implementation**), advancing flexibility of privacy-preserving authentication.
- Designed the **Private Proof API** for anti-fraud in a post-third-party-cookie web. Led three engineers to implement in Chrome. Drafted novel **anonymous credential primitives**.
- Reviewed web proposals for privacy and defensibility, recommending improvements.
- Active in W3C (FedID WG, Security IG, VC WG, Chair of Anti-Fraud CG) and IETF (Privacy Pass WG, CFRG).

2022 **Software Engineer / Scientist**, *Casper Labs*, Remote

- Co-designed novel **consensus algorithm** (presented at FOCODILE 2022). Implemented in **Casper node**, deployed in 2.0 upgrade.
- Researched zero-knowledge use cases and proposed network optimizations.
- Consulted C-suite on network security and scalability strategy.

2019–2022 **Software Engineer (Team Lead)**, *SimSpace*, Boston/Remote

- Designed and implemented Attack Designer program.
- Designed consensus-lite protocol for multi-datacenter cluster coordination.
- Backend security lead: identified and fixed cryptographic vulnerabilities.
